PELVIC & SEXUAL HEALTH: CRITICAL TO YOUR WELLBEING

In the US, too few men know about or understand that there is help for their bladder, bowel, pelvic, and sexual health issues. Men too often think that they have to accept or just "deal with" pain and dysfunction that arises from pelvic and sexual impairment. But, you don't have to put up with loss of sexual function or pelvic pain, we are here to help. Men's health issues we typically see and treat include:

- Interstitial cystitis, chronic prostatitis
- Difficulty with emptying the bladder, leakage, or controlling urinary or bowel function, including constipation
- Sexual dysfunction, including painful erection, ejaculation, or residual post-intercourse pain
- Low back and sacroiliac joint pain, including hip pain and preservation
- Getting back to activity, whether it is sport or sexual functioning

We use a FILM approach: Functional, Integrative & Lifestyle Medicine, as well as RUSI (rehab ultrasound imaging) to take the guesswork out of determining the root cause of your pain and dysfunction. We also use dry needling and other modalities to support your recovery.
